The Program

The Patient Care Technician (PCT) program prepares the Arizona Certified Nursing Assistant (CNAs) to practice in primary healthcare settings that provide continuous, comprehensive care such as a hospital. PCTs provide more in-depth assistance to patients as directed by the medical staff. PCT students that train at the Arizona Medical Training Institute gain a solid foundation in clinical and laboratory practices that address the broader healthcare needs of patients. The program of study provides in-depth knowledge and clinical experiences in areas such as: advanced nursing skills for the certified nursing assistant, basic phlebotomy skills, performing 12 lead EKGs, interpreting EKG readouts, as well as training in Holter monitoring and stress testing.

The Patient Care Technician Program at Arizona Medical Training Institute is a blended eLearning course covering seven (7) weekends of classroom instruction with 30 hours of online learning. Students will then complete a 120 hour assigned externship at a hospital or clinical location designated by AMTI.

“It was a wonderful experience, the instructors were so helpful every step of the way. Thank you so much AMTI staff.”
